We are ISPM - 15 approved and are certified providers of the service. Our Timber comes from partners that follow a strict sustainability policy. We stock, Kiln Dried and treated air dried material.

Wooden Packing / Crating Solution

Industrial wood packaging continues to play a key role in the entire transportation process, it is crowned as one of the most demanded materials in exports. At JSME we always guarantee that our wooden packaging is of the best quality, that is why we opted for materials such as pine or fir, known for their resistance, durability and ease of working and adaptation.

Our on-site packing experts will bring Job Service trusted packaging professionalism and shipping supplies directly to your door in order to ensure safe and secure shipment of your products.

Job Service offers a wide range of on-site packing solutions to meet your industry-specific packaging needs. Our team can perform in-house or on-site packing construction according to your situation.

Aluminum Barrier Packaging

The aluminum foil barrier acts as barrier to the entry of moisture inside the packaging. It is sealed properly to ensure that outside atmospheric moisture is not able to reach the metallic surfaces inside the packaging. Aluminium barrier foils are effective packaging solutions for reducing your need for expensive modified atmospheric warehousing. Barrier foil packaging also act as a flexible liners, allowing for metal and rigid expensive outer packaging to be downgraded to fibreboard or corrugate.

VpCI®- 126 Blue Packing

High Technology Vapor phase Corrosion Inhibiting Film and Bags Patented Worldwide Multimetal VpCI Systems

Vapor phase Corrosion Inhibitor (VpCI) 126 Series Films combine the latest film technology with the most effective corrosion protection for all of your metal products. Sealing your product in Cortec VpCI films protects metal parts from all types of corrosion including rust, tarnish, stains, white rust, and oxidation for up to 5 years. It's as putting your product in a Cortec VpCI package.

Milcorr® VpCI® Shrink Film

MilCorr VpCI Shrink Film is a heavy duty film featuring Cortec multimetal Vapor phase Corrosion Inhibitors (VpCI). MilCorr VpCI Shrink Film provides a top-notch universal protection system with high ultraviolet (UV) light protection to maintain the integrity of the film itself as well as the parts packaged within.

Heat Shrink-wrapping (Multiwrapping)

Made of polymer plastic film, heat shrink wrap is available in a variety of thicknesses, clarities, strengths and shrink-ratios. Shrink wrapping has many applications across various industries. Not only is it easy to use, but it offers a wide range of benefits as well. When heat is applied to shrink wrap, it creates a very tight seal. This plastic seal then fully protects the shrink wrapped contents. Once sealed, the items are no longer vulnerable to the damage that can be caused by dust, dirt or moisture. Some types of shrink wrap even come with UV protection, to keep your products safe from the sun's harmful rays.

Flat Rack Lashing

On flat racks, your cargo can be exposed to extreme external forces. Lashing chains & straps protect against these elements and eliminate cargo movement during transportation, on road, rail and sea. This securing system can be used for heavy, irregularly shaped loads, including heavy machinery and other equipment. We at JSME offer 100+ lashing and buckle combinations. The combination of the Chains, buckle and lashing type determines the ultimate strength of the system.

Safe and solid cargo lashing belt is produced using extraordinary steel and corrosive safe fibre materials. Flat rack lashing belt can be tied in a split second and it never tumbles off.

Waste management system

Job service follows a strict sustainability policy. Much effort is put into reducing timber waste and optimizing the fall down by converting them into revenue all the time using simple and cost-effective methods.

The waste management process starts by procuring raw material with exact specifications as per the production requirement to reduce wastage arising from the cut offs.

Our waste consists of Sawdust, small and medium size timber cut offs.

The sawdust and small pieces of timber will be crushed, thereafter a low emission Glue will be added to the mixture and then passed into a compression mold, resulting in compressed Saw dust blocks of the required specifications that is used in the production of pallets.

The sawdust blocks have a higher density than the conventional solid wood block and lesser occurrence of cracks. Due to its clean finish and sustainability, it is fast becoming preferred.

The Medium size timber cut offs are put into a shaving machine that produces wood shavings that will be used as horse beddings in the stables. The horse shavings are baled and marketed within the UAE.

The UAE hosts the world cup for Horse racing and is home and breeding station to many award - winning race and endurance horses.

Advantages compress pallet

- Better nail retention
- High Density
- No cracking
- Less water absorption
- No mould or damage by insects
- Sustainability and recyclable properties
- ISPM 15 Compliant

Your Bedding Choice Directly Impacts the Health and Performance of Your Horse

Our manufacturing process is exclusive to Royal Horse Bedding. Employing multiple dust extraction stations and aspiration of the wood shavings to specific sizing for easy picking. I'm confident you will find that Royal Horse Bedding will not only meet your needs, but surpass your expectations. Your choice of horse bedding directly impacts the health of your horses and their environment. We take our horse bedding seriously, and we're glad you do too! Our pellets are manufactured to higher standards than other pellets on the market. We use only kiln-dried pine shavings.

ABSORBENCY

Overall, horse bedding absorbency is important to ensure that horses remain dry. Unabsorbed ammonia from urine can accumulate in a stall and irritate horses' eyes and respiratory tracts. Fine shavings and sawdust will produce a higher absorbency than medium or large wood shavings. The trade-off, however, is that they may have more dust. Also, kiln-dried wood shavings tend to be more absorbent and feature a lower moisture content.

CONSISTENCY

When looking for optimal horse bedding suppliers, it is important to evaluate how consistent the product quality and size are. If you prefer medium wood shavings, for example, you do not want to have some bags that mix different sizes of shavings, which will minimize the advantages of medium shavings (minimal dust, beautiful look).

CUSHIONING

Premium-quality wood shavings made of soft wood offer exceptional cushioning for horses. Typically, medium and large wood shavings will provide superior support for horses' hooves and cushioning for their joints.

EASE OF USE

Horse bedding should be easy to use. Wood shavings are very easy to clean, store and transport. Finer wood shavings make it easier to sift manure from clean bedding than larger wood shavings. Horse pellets require additional training to learn how to properly muck out.

APPEARANCE

Some horse owners prefer larger, fluffy wood shavings for their beauty, softness and airy-like appearance. However, above and beyond appearances, make sure that your horse bedding is consistent and high quality, meaning that it is made of first-transformation wood (no glue or varnish residues) and free from wood sticks or other debris.

AVAILABILITY

Discerning horse owners understandably want quality and consistency from one bag to the next. However, product availability is even more important. The last thing you want is to choose horse bedding that is not readily available all year long in your area or is too costly to deliver.

GOOD PACKAGING

Horse bedding must come in quality, heat-sealed packaging that is made of durable, waterproof plastic and is properly compressed. If not, the packaging might be ripped, jeopardizing the quality of your horse bedding. Make sure that your horse bedding supplier offers practical sizes for easy storage.

100% Pine Pellets

Customizing Indoor and Outdoor Design

Our experienced and skilled team provide maintenance services for indoor and outdoor decor.

Our specialty lies in restoration works of furniture and fittings.

Custom made and Concept wood creations to add the right ambience to your home.

Meticulously quality conscious, with a keen selective process for the best mix of raw material to achieve the desired result and high durability.
